

Program-12

To construct a VLAN and make the PCs communicate among a VLAN

Topology, Procedure and Observation:

6] Select the switch

- Go to config
- Go to ethernet 6/1 i.e connected to router.
- make it the trunk

7] Configure the PCs as shown in the topology.

8] Select switch:

- Go to config
- Go to fastethernet 2/11
- Set VLAN number as 2 i.e 'cse2sc'
- Similarly set VLAN 2 for fastethernet 3/11 interface

9] Configure the router:

```
Router(config)# interface fastethernet 0/0
Router(config-if)# ip address 192.168.1.1 255.255.255.0
Router(config-if)# no shut
Router(config-if)# exit
```

Now, to configure the router's VLAN interface.

```
Router(config)# interface fastethernet 0/0.1
Router(config-subif)# encapsulation dot1q 20
Router(config-subif)# ip address 192.168.2.1 255.255.255.0
Router(config-subif)# no shut
Router(config-subif)# exit
```

↓ the set ip address of PC2 in VLAN network mode.

10] Ping devices within the same VLAN and to devices of different VLAN.

OBSERVATIONS:

1) When devices are pinged within same VLAN:

- Pinging 192.168.1.3 from 192.168.1.2

- The data packet doesn't go to the router.
- The switch forwards the packet without the need of the router.

2) When a device pings a device of another VLAN:

- Pinging 192.168.2.3 from 192.168.1.2
- The data packet's journey is as follows:

192.168.1.2 → switch → Router
 ↓
 192.168.2.3 ← switch

3) VLANs divide a single switch into multiple logical switches.

- Devices in one VLAN cannot directly communicate with devices in another VLAN without a router.

4) Traffic Isolation:

- Each VLAN maintains its own broadcast domain
- Broadcast sent by devices in one VLAN do not reach devices in another VLAN.

5) VLAN trunking allows switches to forward frames from different VLANs over a single link called trunk

- This is done by adding header information called tag to the ethernet frame - VLAN-tagging

Screenshots:

Command Prompt

Packet Tracer PC Command Line 1.0

PC>ping 192.168.2.2

Pinging 192.168.2.2 with 32 bytes of data:

Request timed out.

Reply from 192.168.2.2: bytes=32 time=0ms TTL=127

Reply from 192.168.2.2: bytes=32 time=0ms TTL=127

Reply from 192.168.2.2: bytes=32 time=4ms TTL=127

Ping statistics for 192.168.2.2:

Packets: Sent = 4, Received = 3, Lost = 1 (25% loss),

Approximate round trip times in milli-seconds:

Minimum = 0ms, Maximum = 4ms, Average = 1ms

PC>ping 192.168.2.2

Pinging 192.168.2.2 with 32 bytes of data:

Reply from 192.168.2.2: bytes=32 time=0ms TTL=127

Reply from 192.168.2.2: bytes=32 time=0ms TTL=127

Reply from 192.168.2.2: bytes=32 time=2ms TTL=127

Reply from 192.168.2.2: bytes=32 time=0ms TTL=127

Ping statistics for 192.168.2.2:

Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),

Approximate round trip times in milli-seconds:

Minimum = 0ms, Maximum = 2ms, Average = 0ms
